

Past papers, Global Health :-

1. All are true about health except: **Cultural and political well-being**
 2. Not from the functions of public health: **Providing a surgical treatment**
 3. Wrong about public health: **Focus on individual patients treatment**
 4. Wrong about WHO public health: **setting national priorities**
 5. Wrong about global burden of disease: **Assisting poverty**
 6. Wrong about summary measures: **Mortality-based calculation specifically**
 7. Wrong about DALYs: **Multiplying the years lost by disability by years lived with disability + it was developed by Kankolish Institute** (something like this)
 8. Wrong about QALYs: **It equals life expectancy multiplied by HRQL**
 9. Wrong about epidemiological transition: **More infectious diseases like malaria and HIV**
 10. Not example on effect of culture on health: **Using pesticides**
